Subject: Re: Techalloy Co., Union, IL Plume Migration Sampling 2015

Obviously your call, but i'd point out that if we need to go plume chasing again and start the effort in April, full characterization might not be done for 4-6 months after that, which would start inducing some "creep" in the schedule.

on the other hand we probably couldn't realistically get out there before January, which could pose problems for sample collection.

John:

Gerry and I discussed your request last week.

In light of the situation where the 2014 plume investigation was not completed until April 2015 based on EPA's requests to conduct additional sampling in January 2015 and April 2015 and the upcoming winter months, Central Wire respectfully requests that we submit a work plan in December or January and that we delay the execution of the work until April 2016, one year after the last plume investigation was completed.

Regards,

Jack

Mr. Ruopp,

The 2014 Plume Migration Sampling showed that the plume is migration. EPA would like Central Wire to sample the plume as in the 2014 study. Please provide EPA with a sampling plan and possible dates for the work. If you have any questions please contact me.

Respectfully,
